

EZReader Android Viewer Application

EZReader can display an Android smart phone on the computer screen, allowing the phone to be operated by touching the screen instead of touching the phone.

This provides a 4X magnification of the phone screen size, making it much easier to see and operate.

Main Screen

Here's an image of an Android phone, displayed on the PC.

Setup

To display the Android, it must first be placed in Developer Mode. Follow these steps to set the Android phone to Developer Mode.

- Go to Settings - About - Software Information - Build Number
- Tap the phone 7 times to enable Developer Mode

The exact steps to viewing the Build Number may vary from phone to phone.

With Developer Mode on, simply connect the phone via USB cable to the PC and turn on the EZReader Android application.
