

## EZReader BigX Application

At its simplest, the "BigX" application places a large "X" icon over the small "x" icon found in the upper right corner of a browser. When EZReader is used to open a browser, the BigX icon appears automatically. Pressing the BigX icon closes the browser!

It's a simple concept but is extremely useful to low vision users because the browser small "x" is too difficult to see.

## BigX Main Screen

In addition to the BigX icon that is used to close the browser, a row of buttons/icons is provided to give the user additional control over

the browser. As with the BigX icon, these icons provide easy to see access to features useful when using a browser.

The icons provide the following capabilities:

- **Arrow Keys** work exactly the same as the browser arrow keys - navigates forward and backwards through visited URLs
- **Zoom Keys (3)** - zoom in, zoom out and zoom 100%
- **Copy** - places selected text on the clipboard
- **Speak Clipboard** - read text from the clipboard
- **Print** - print the current browser page
- **Bookmark** - create a bookmark for the current page
- **High Contrast** - toggle Windows High Contrast mode
- **OSK** - display On-Screen Keyboard, whose content can be placed on the clipboard
- **Capture Plus** - allows selection of screen area from which to do an OCR text extraction
