

## **EZReader File Explorer Application**

File Explorer allows a user to navigate through all folders on the PC, including viewing lists of files in those folders.

The users selects a folder and all of its files and subfolders are displayed in a list. Folders in the list may be expanded to drill down through the Windows folder structure.

Files may be opened in the user's default viewer, copies, renamed and deleted.

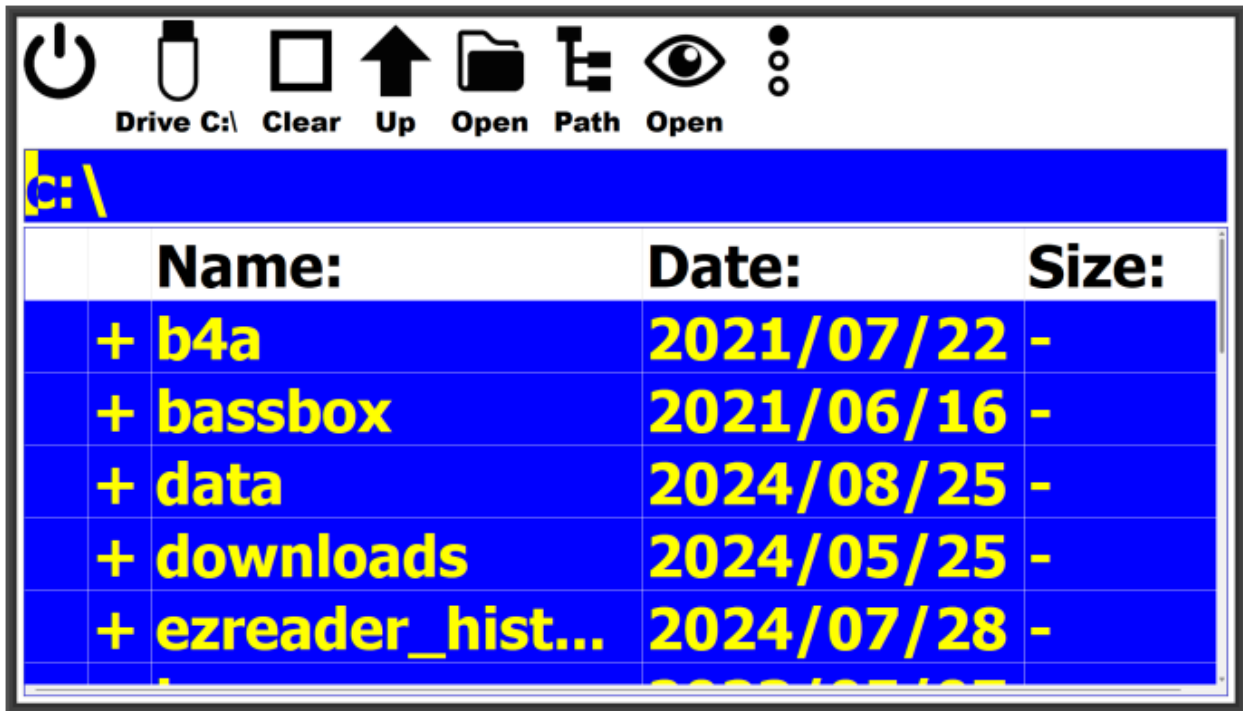

EZReader Explorer makes it easy to jump from on common location to another, including these:

- **Root Folder** - c:\
- **Desktop** - c:\users\username\desktop\
- **EZReader Archive** - c:\ezreader\archive\
- **Documents** - c:\users\username\documents\
- **Flash Drive** - d:\, e:\, etc. (any attached flash drive)

Any selected folder can be opened in Windows Explorer.

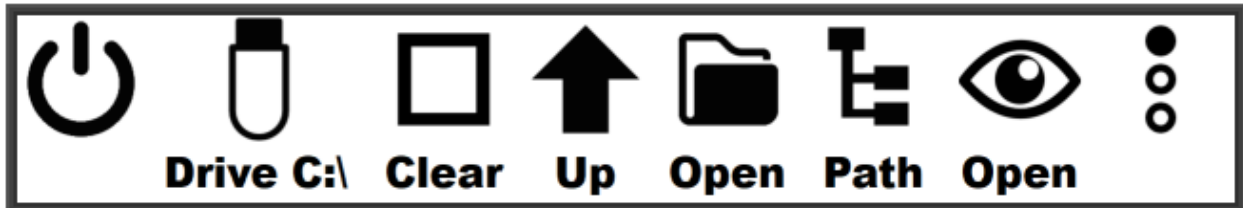

Any selected file can be opened in the user's default client for that file type.

Individual files may be copied, renamed or deleted.

### Toolbar Commands:
