

EZReader Gallery Application

Image Gallery application provides the ability to view images as thumbnails and individually.

Images are organized into folders. Sample folders and images are installed with EZReader. Folders can be created and deleted by the user, with the exception of two protected folders - "email", "imports" and "snapshots", which are reserved for use by EZReader to store email attachments and camera snapshots.

Image can be imported via flash drive, received as attachments from emails or created externally to EZReader and saved to one of the Gallery folders.

By default images are viewed in a 2x2 thumbnail arrangement. A single image may be viewed by clicking on the image in the grid. Once a single image is displayed, click on a single image to zoom in on the image.

The Image Gallery displays images at the largest possible size that will fit in the EZReader window. To adjust image sizes, the user may resize the EZReader window.

During installation, EZReader creates these image folders, each containing sample images.

Sample Folders:

These folders provide some sample images, which the user may delete as they add their own images.

- **Ocean** - A few ocean animals
- **Samples** - Variety of sample images
- **Birds** - A few bird images

Reserved Folders:

There are also 3 reserved folders, created by EZReader when needed. If a user deletes a reserved folder, EZReader will recreate it when needed to save a file.

- **Snapshots** - reserved for images created by the camera
- **Email** - reserved for images received via email
- **Import** - reserved for images imported from a flash drive

Image Editing Functions

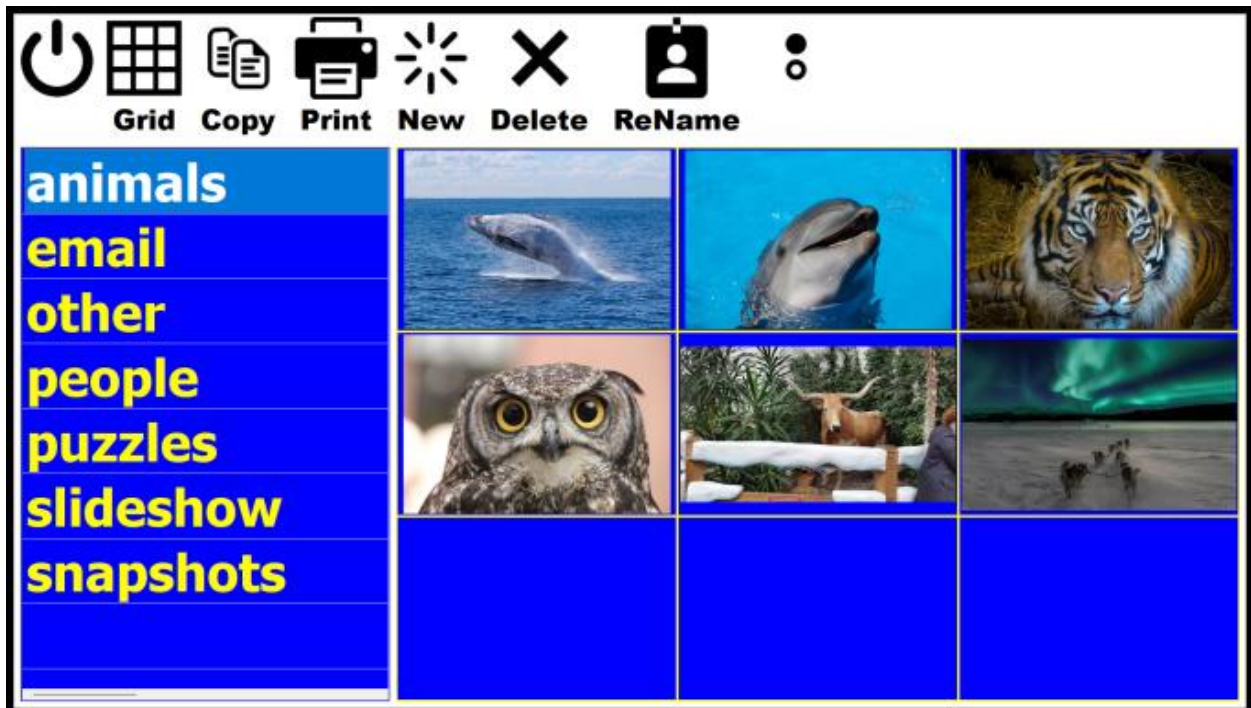

The Image Gallery also provides a number of image editing capabilities:

- **Copy** - copy image to clipboard
- **GrayScale** - convert image to grayscale colors
- **Contrast** - raise or lower the image contrast
- **Brightness** - raise or lower the image brightness

- **Rotation** - rotate the image 90 degrees clockwise
- **Crop** - crop an image to an area specified by the user

For easier viewing, images from received emails are automatically copied to the Gallery subfolder “email”.

Images in a selected folder are shown as a grid of images:

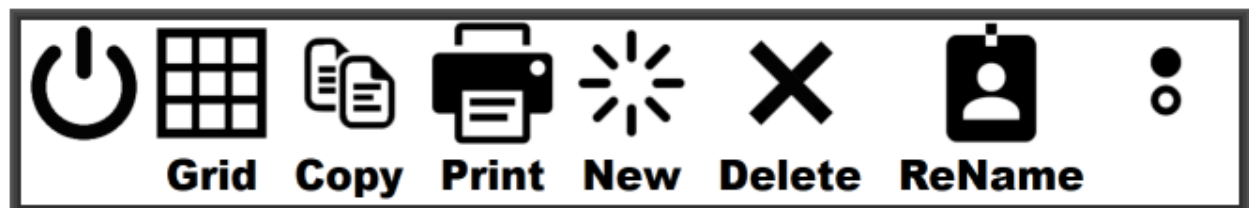

Individual images can also be shown:

Toolbar Commands (Grid):

When displaying a grid of images, there are two rows or command icons. When displaying individual images, there are three additional rows of commands.

Grid: Determines how many images to show in the grid

Copy: Copy the image montage to the clipboard

Print: Print the image montage

New: Create a new folder

Delete: Delete the selected folder

ReName: ReName the selected folder

Larger: Increase font size

Smaller: Decrease font size

Bold: Toggle text bold attribute

Font: Cycle through 3 available fonts

Color: Cycle through 4 available color pairs

Toolbar Commands (Individual Image):

When displaying a grid of images, there are two rows or command icons. When displaying individual images, there are three additional rows of commands.

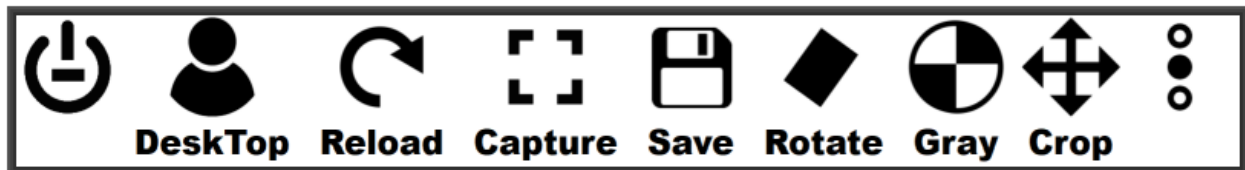

Prev: Display previous image in the current folder

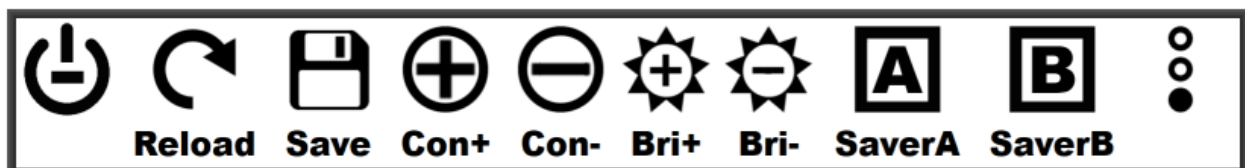

Next: Display next image in the current folder

Copy: Copy entire image to clipboard

Print: Print image
Delete: Delete image file
ReName: Rename image file
Name: Display image file name

Desktop: Set desktop image
Reload: Reload image from original file on disk
Capture: Save selected rectangular region of image to clipboard
Save: Save changes to image (overwrite original file)
Rotate: Rotate image 90 degrees clockwise
Gray: Convert image to grayscale
Crop: Reduce image to selected rectangular region

Reload: Reload image from original file on disk
Save: Save changes to image (overwrite original file)
Con+: Increase contrast

Con-: Decrease contrast

Bri+: Increase brightness

Bri-: Decrease brightness

SaverA: Use image in screen SaverA

SaverB: Use image in screen SaverB
