

EZReader Puzzle Application

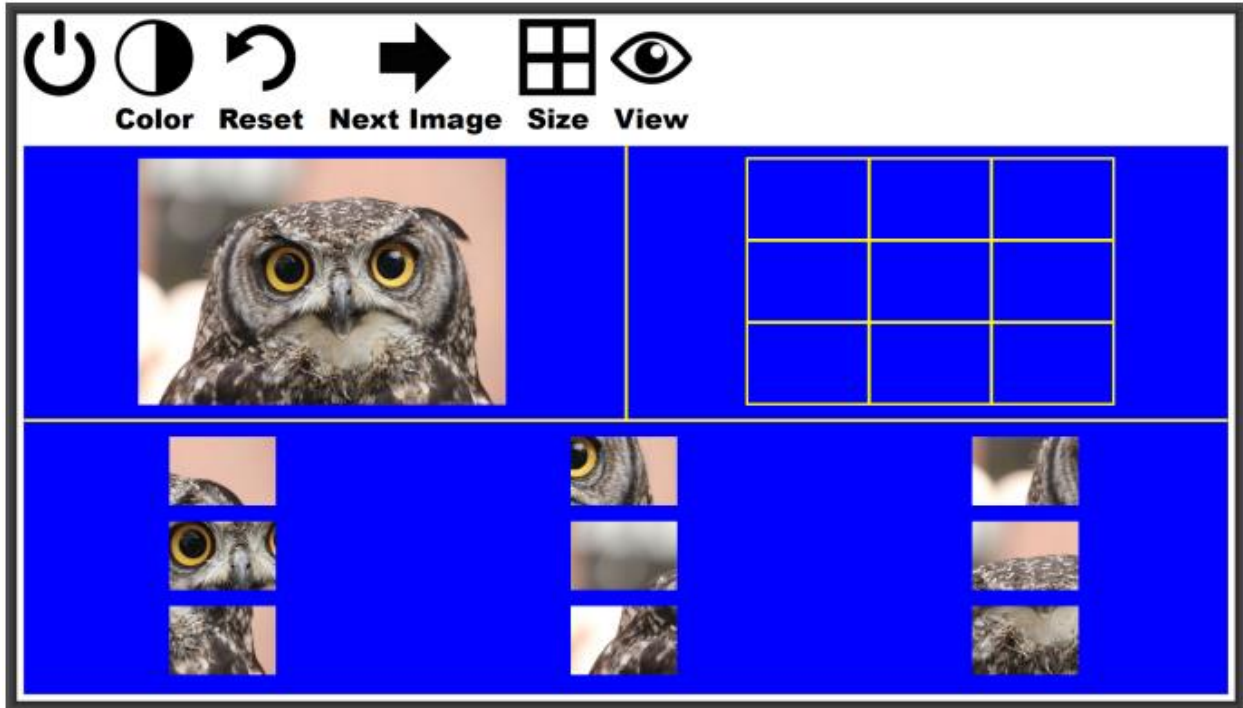

Puzzle takes an image apart and lets the user restore the image by placing the pieces in the right location.

Images are taken from the Gallery subfolder "puzzles".

The user can set the number of puzzle pieces that are used - from 2x2 to 7x7, depending on the difficulty level the user wants to play. Fewer puzzle pieces are easier to see.

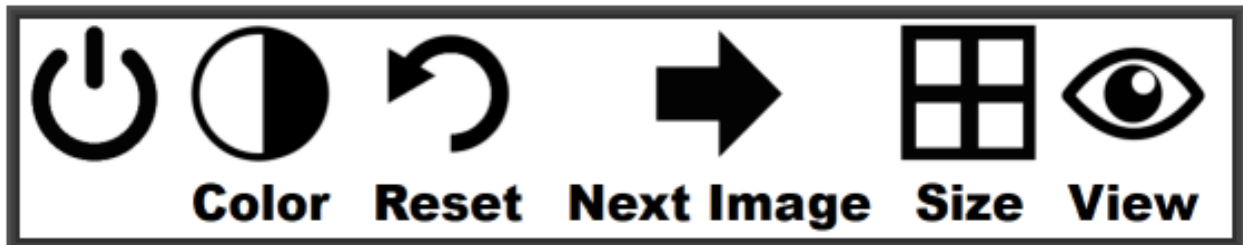

To move a piece, select it with the mouse (or finger). Then, click on a board location to where it should be moved. If the board location is correct, the piece is displayed on the board and removed from the table. If the board location is not correct, the piece is not moved and the user is notified that the selected location is not correct.

There no time limit on playing a game. Play until you solve the puzzle or start a new game at any time.

Toolbar Commands:

Puzzle has a single row of command icons:

Color: Toggle the application colors margins

Reset: Restart the puzzle

Next Image: Display a new image

Size: Change the number of puzzle pieces

View: Change how the pieces are organized/sized
