

EZReader SlideShow Application

Slideshow displays images one after another, at time intervals specified by the user.

Slideshow can display images found in the Gallery. This includes images which the user has received via email and snapshots taken with the EZReader document camera.

By default all images within the gallery\ folder are included in the slideshow. However, the slideshow can be limited to only those images found in the gallery\slideshow\ folder.

When the slideshow is running, images are randomly selected from the source folder(s). Images can be constrained to the SlideShow graphical area or the images can be expanded so that no border is shown in the graphic area.

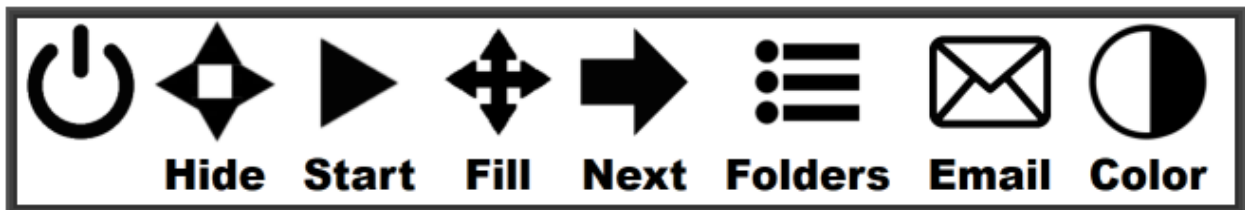

The Slideshow Toolbar can be hidden to provide a full-screen display of images.

The Slideshow is set to display a new, random image every 5 seconds.

Toolbar Commands:

Slideshow has a single row of command icons:

- Hide:** Hide the toolbar
- Start:** Start the slideshow
- Fill:** Fill the entire image area
- Next:** Next image

Folders: Limit images to slide folder

Email: Hide email images

Color: Cycle through 4 available color pairs
