

EZReader Solitaire Application

13 July 2024

Introduction:

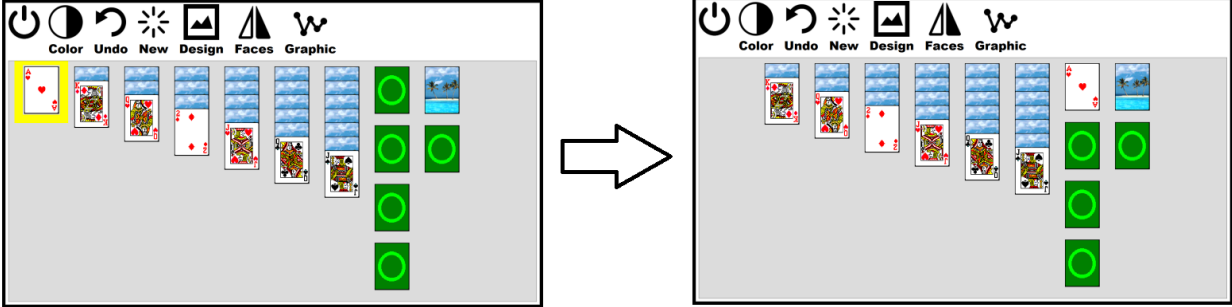

Solitaire works very much like all other Solitaire games, with a few special features thrown in for low vision users.

There are no time limits and a user can start a New game at any time, without completing the current game. If the user exits Solitaire, the game will be restored when Solitaire is restarted.

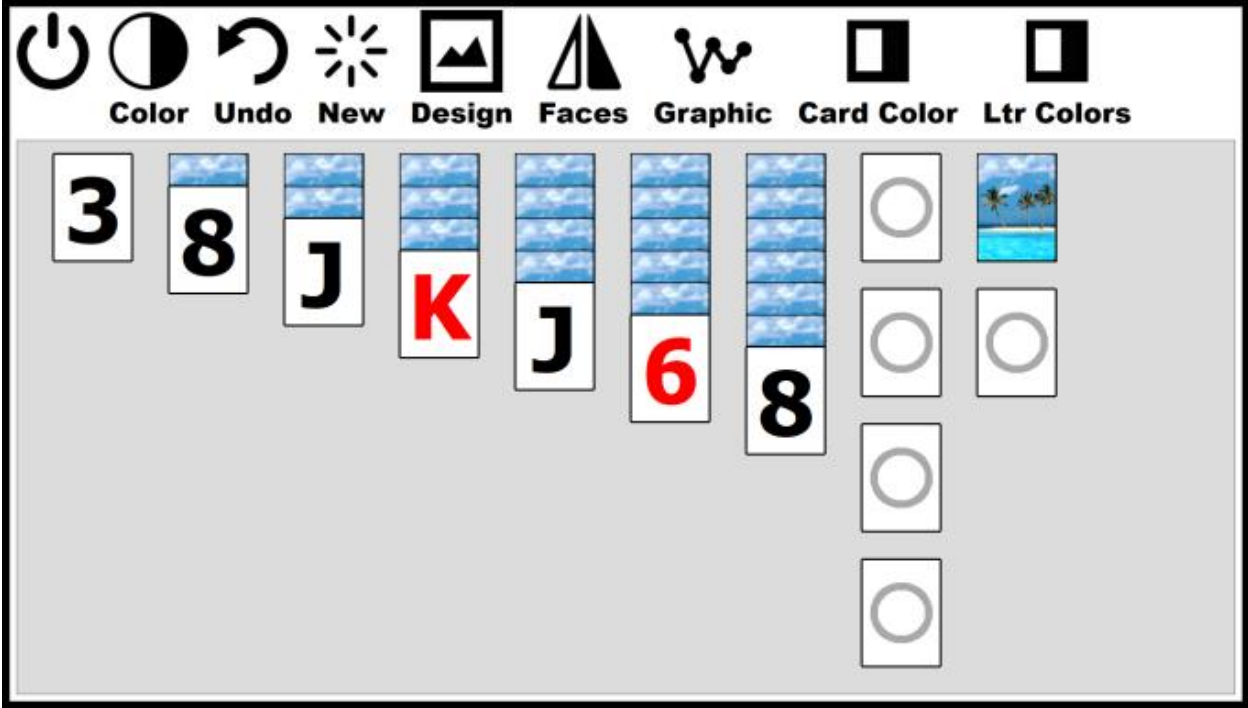

First, there is no “dragging” of cards. To move a card, click the card you want to move and then click where you want to move the card. In this example, the Ace is selected, as shown by a border around

the card. Then then user clicks an empty Foundation location to relocate the card.

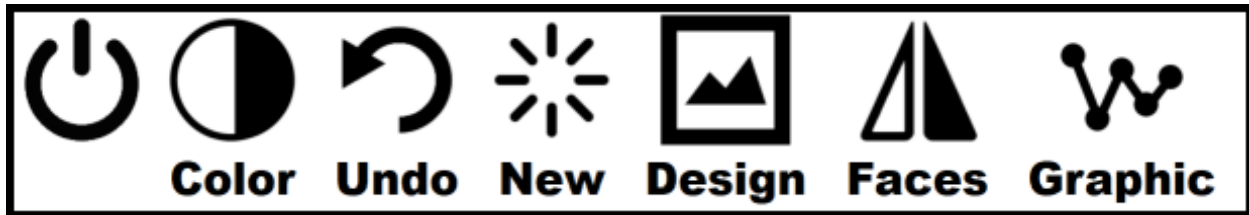

Secondly, the normal card faces can be replaced with a single, larger character that many users find easier to see than the normal card graphics, as shown in this next image:

Toolbar Commands:

Solitaire has a single row of command icons:

Color: Background color

Undo: Undo the most recent move

New: Start a new game

Design: Change the pattern used on the top of cards

Faces: Expose all hidden card faces (i.e., cheat)

Graphic: Show an simpler, alternative card face design

When Graphic is selected, two additional icons are displayed, allowing the user to select the card face and letter colors.

Repeatedly pressing the two new icons will cycle through several supported color combinations.
