

EZReader Voice Commander Application

The Voice Commander allows EZReader to recognize commands spoken by the user.

When opened, Voice Commander sits at the bottom of the desktop, listening for a command such as “Open Editor”.

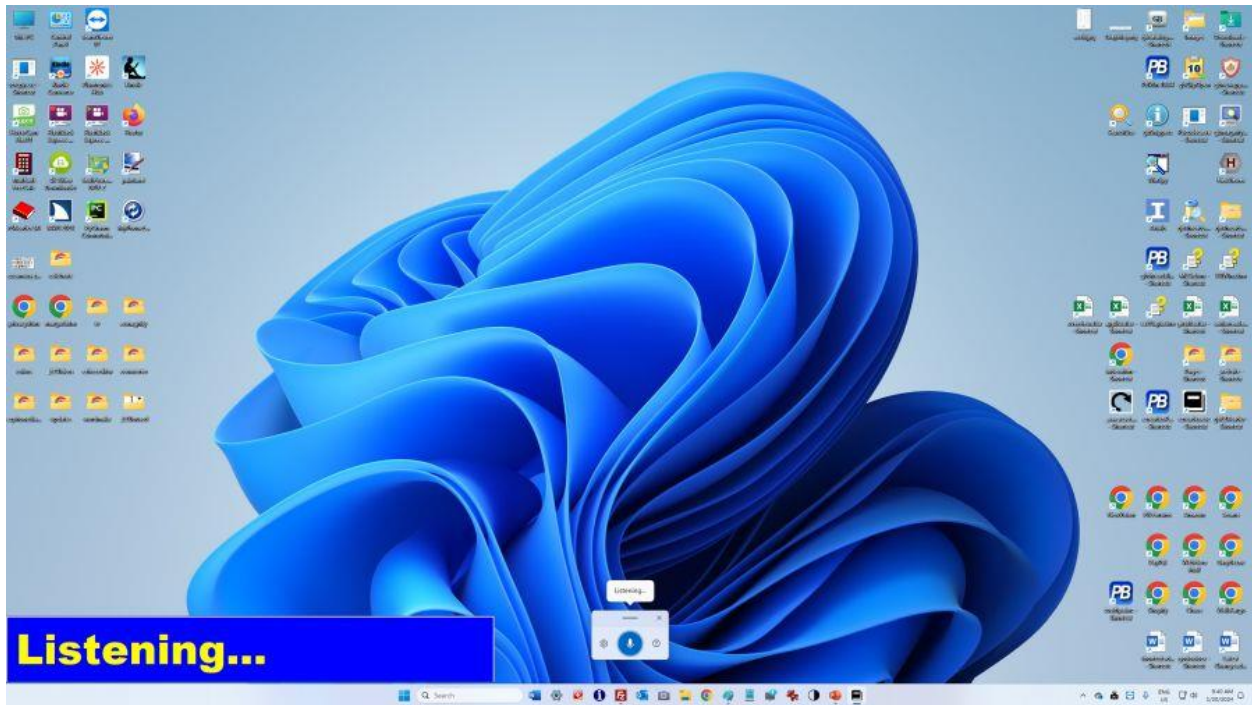

When it recognizes a command it will execute the command and then close.

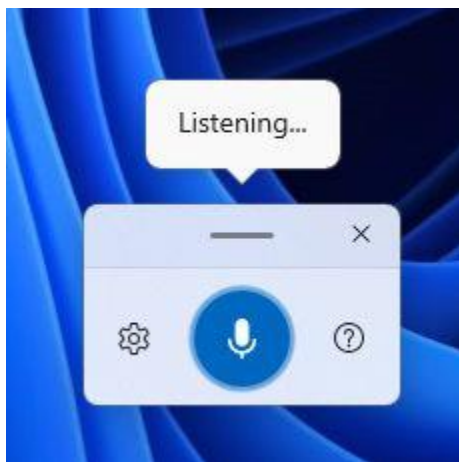

The EZReader Voice Commander allows users to open EZReader applications by saying "Open Application Name". There are about 100 commands that are currently recognized and more are being added on a regular basis.

Voice Commander Main Screen

When started, Voice Commander displays a "Listening" box in the lower left corner of the desktop.

Then, the user must wait for Windows to display the following window. The user will hear a beep when the window appears, acknowledging that Windows is ready to receive voice inputs.

Once that window is available and the beep is heard, the user can start speaking. What the user speaks will be shown in the Voice Commander windows. When the window contains a recognized

command, Voice Commander will close and the recognized command will be executed.

Voice Commander will not show the text spoken by the user until the user pauses, allowing Windows time to convert the voice inputs to text.
